Re: **Clayton Chemical Company Superfund Site, 1 Mobile Avenue,
Sauget, Illinois (St. Clair County) - Update of Requirements
of November 23 and 30, 2001 General Notice Letter**

Dear Sir or Madam:

This letter notifies you that the amount of hazardous waste that you contributed to this site was less than 10,000 gallons. The United States Environmental Protection Agency (U.S. EPA) has decided that Potentially Responsible (PRPs) that contributed less than 10,000 gallons of hazardous waste to this Site are not major contributors. The Agency's decision to use the 10,000 gallon amount is based, in part, on a new volumetric ranking of the hazardous waste that PRPs contributed to this Site.

Although you are still a PRP at this Site, U.S. EPA is not requiring you to take a lead role in the clean up of this Site. The PRPs that contributed most of the hazardous material to this site or the U.S. EPA may contact you in the future regarding the clean up of this Site.

U.S. EPA welcomes any suggestions, information or advice from the current PRPs (or any other interested parties) concerning the Site. U.S. EPA has placed copies of the Illinois EPA hazardous materials records for 1995-1998 and the September 2001 U.S. EPA Site Assessment, in its Regional Waste Records Center (phone no. 312/886-0900) for review or copying requests by any interested party. The Waste Records Center is located in the U.S. EPA Regional Office at 77 W. Jackson Blvd., 7th floor, Chicago, Illinois 60604. U.S. EPA also intends to have a review copy of both the Illinois EPA documents and the U.S. EPA Site Assessment available in the office of the Illinois EPA in Collinsville, Illinois.
